

## Roseville Advanced Homes Program

### Announcing the 2023-2025 Roseville Advanced Homes Program

**Starting in fall 2022, the Roseville Advanced Homes Program's (RAHP)** requirements and incentive amounts have changed. RAHP is a solely all-electric program, and the mixed-fuel pathway is now retired. In addition to new construction incentives, multifamily alteration projects are eligible for participation in the program in the 2023-2025 program cycle.

RAHP will continue to help Roseville Electric Utility (REU) customers incorporate all-electric measures in new construction residential projects, including single-family, Accessory Dwelling Unit (ADU), and multifamily buildings, to prepare for future changes in building standards.

The following incentive amounts are available:

- New construction single family projects: Up to \$5,200 per home
- New construction multifamily projects: Up to \$5,100 per unit
- Multifamily alteration projects: Up to \$6,175 per unit

Incentives are based on the committed construction completion date and de-escalate in value each program year. **Get all of the details on the new 2023-**

## Upcoming Webinar: Multifamily Incentives for All-Electric Construction

Developers, owners, contractors, and managers of multifamily properties are invited to attend our upcoming webinar on **October 13th** where we will discuss available incentives and building requirements for both new construction and alteration projects. Attendees will also learn about special bonus incentives for affordable housing and central heat pump water heating designs. **Sign up today so you don't miss out!**

## Upcoming Webinar: Single-Family and ADU Incentives for All-Electric Construction

Single-family developers and builders will have the opportunity to learn about the all-electric new construction pathway at our upcoming webinar on **October 20th**. Homeowners interested in building an ADU on their property are encouraged to attend as well. Our hosts will cover available incentives, building requirements and the permitting process for ADUs. **Get registered and mark your calendars so you don't forget.**

**Learn More: Two Program Pathways**

## New Construction

- Incentives available for eligible single-family, duplex, townhome, ADU and multifamily all-electric new construction projects.
- Projects must not have any gas connections to the residential units.
- Projects must meet minimum code requirements and be California Home Energy Rating System (HERS) compliant.

## Multifamily Alterations

- Multifamily REU customers can receive incentives when they replace gas equipment with electric alternatives.
- All gas appliances and equipment must be replaced and all gas meters must be removed to be eligible.
- Affordable housing and central heat pump design projects can receive bonus incentives.

**Leverage Additional REU Rebates**

REU customers can take advantage of additional savings opportunities by participating in city-run incentive programs. When paired with RAHP incentives, the Residential Electric Homes Program, for example, can help make your all-electric construction project even more affordable.
